

#### PROJECT SUMMARY

##### CLIENT

Cardinal Stritch University  
Milwaukee, WI

##### PRODUCT

Up Systems

##### SIZE

15 workstations

## Cardinal Stritch University

Founded in 1937 by the Sisters of St. Francis of Assisi, Cardinal Stritch University in Milwaukee is a comprehensive and coeducational facility for higher learning with an array of undergraduate and graduate programs.

The original library housed old wooden private study carrels, similar to telemarketing stations, and were traditionally designed for textbook and writing usage with no room for modern laptops, or electronic devices. The university wanted to update their library facility to eliminate the 'traditional' library look and provide a contemporary environment conducive to leaning and encourage students to come to the library to study, read and work. They also want to provide students with ample power to electrify cellular devices and laptops, while giving them ample workspace and privacy.

Fifteen Up workstations in a 120° configuration blended well with existing furniture and refreshed the aesthetic of the library with a more contemporary open plan.
