

## PROJECT SUMMARY

### CLIENT

Mozilla  
Toronto, ON

### DESIGN FIRM

InDeVision

### PRODUCT

Up Systems

### SIZE

63 workstations

## Mozilla

Mozilla, the creator of the Firefox browser, has a mission to promote openness, innovation and opportunity on the Web with the intent to harness the creative power of thousands of programmers on the Internet and fuel unprecedented levels of innovation in the browser market.

When Mozilla moved to a larger location to accommodate more brainstorming space, open areas for collaboration and hotelling stations for visitors, the key challenge was to keep the space functional as well as maintaining a level of fun.

Tayco accomplished this with Up workstations in a 120-degree configuration. The low glazed panels allowed the natural light to transmit throughout the open, loft-style space and promoted team collaboration. Mobile pedestals provided extra guest seating as well as storage for files and personal items.

“Our office quickly turned from a blank white box into a vibrant, fun space that reflected both who we were and how we liked to collaborate and work with each other”, comments Mike Beltzner, Director of Firefox, Mozilla Canada, on the outcome of the project.
