FIG[40]

Fig40 is a Toronto based industrial design studio driven to developing relevant, sustainable and award-winning products that inspire collaboration – collaboration between people, and collaboration between design and manufacturing. The outcome is a design that is not only engaging and relevant but also a solution for bringing people together in organic and deliberate ways.

Terence Woodside

Terence Woodside is a founding partner of Fig40 studio. With a degree in Mechanical Engineering from Queen's University and experience in automotive and furniture manufacturing, he understands the nature of natural forces, what materials can do, and how they are shaped. In designing beautiful systems like Tayco's Switch, his goal is to bring better products into the world through process and experience.

Tayco Tables COLLECTION

"The Tayco Table Line (Koko, Kip, Norris) was a fascinating project to work on. Workplace design is in a state of flux with many interpretations of what a private office even is and how they are used.

Our challenge was to design a product that can respond to the evolving and uncertain requirements of clients and designers while remaining relevant to more conventional applications, all the while with a product that can be made efficiently by Tayco at a competitive cost point. This line of tables is a system that reinterprets caseloads, it is flexible, with a clear identity and wide scope of applications."

Lee Fletcher

Lee Fletcher is an industrial designer and also a founding partner at Fig40. He received an MA in Industrial Design from Manchester Metropolitan University, and is inspired by the intersection of design, business and manufacturing. Whether it's creating new furniture systems or business equipment, his work has won numerous awards and accolades including a RedDot award in 2013 and the Best of Canada Design award.
